🚀 Quick Start Guide - GitHub Integration

For Repository Admins

1. Enable Workflow Permissions (2 minutes)

```
1. Visit: https://github.com/sfgaluminium1-spec/sfg-app-portfolio/settings/installa-
tions
2. Click on "SFG GitHub App"
3. Scroll to "Permissions" → Grant "workflows" read & write
4. Save changes
```

2. Configure Secrets (3 minutes)

```
Visit: https://github.com/sfgaluminium1-spec/sfg-app-portfolio/settings/secrets/ac-
tions

Add these secrets:
- DATABASE_URL: Your PostgreSQL connection string
- NEXTAUTH_SECRET: Generate with: openssl rand -base64 32
- NEXTAUTH_URL: https://sfg-chrome.abacusai.app
```

3. Push Workflows (1 minute)

```
cd /home/ubuntu/sfg_marketing_website
git add .github/workflows/
git commit -m "feat: Add GitHub Actions CI/CD workflows"
TOKEN=$(python3 /home/ubuntu/.github-credentials/get_token.py)
git push origin master:feature/marketing-website
```

4. Create Pull Request

```
Visit: https://github.com/sfgaluminium1-spec/sfg-app-portfolio/pull/new/feature/mar-
keting-website
- Review changes
- Merge to main
```

For Developers

Clone & Setup

```
git clone https://github.com/sfgaluminium1-spec/sfg-app-portfolio.git
cd sfg-app-portfolio
git checkout feature/marketing-website
cd app
yarn install
```

Development

```
# Start dev server
yarn dev

# Run tests
yarn lint
yarn tsc --noEmit

# Build
yarn build
```

Create Feature

```
git checkout -b feature/your-feature
# Make changes
git add .
git commit -m "feat: your feature"
git push origin feature/your-feature
# Create PR on GitHub
```
